This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 822688.

The RAISD project is funded by the European Union's DG Research and Innovation, H2020-SC6-MIGRATION-2018: Addressing the challenge of forced displacement

**Reshaping Attention and Inclusion
Strategies for Distinctively vulnerable
people among the forcibly displaced**

www.raisd-h2020.eu

Date of project: 01/02/2019 – 31/01/2022

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 822688.

RAISD

aims at identifying vulnerable groups among forcibly displaced people, their specific challenges and needs, to provide them tailored attention and inclusion strategies.

Objectives:

- 🌍 Discover highly vulnerable groups among Forcibly Displaced People.
- 🌍 Develop the novel concept of vulnerability context to gain a different perspective in dealing with migration history.
- 🌍 Analyse their specific challenges and needs regarding integration and well-being.
- 🌍 Identify suitable and evidence-based aid strategies to promote their involvement and improve their inclusion in host societies.

Research strategies:

- 🌍 Combine methodological triangulation of Responsible Research and Innovation, action research, and socio-ecological models.
- 🌍 Monitor inclusion measures for vulnerable migrants developing innovative standard methods (Collaborative Research and Innovation Online tool).
- 🌍 Co-design actions transversely integrating the gender perspective and supporting sustainability.
- 🌍 Integration of Social and Computer Sciences research.

Innovative Results:

🌍 Vulnerability Contexts.

The treatment of phenomena related to VGs in FD requires understanding the context where they happen. This context involves three components. First, the people of the VG, with their vital trajectories, contexts of departure, and individual vicissitudes. Second, the host environments and their societies, with their history, culture, socio-economic situation, civil society, and attitudes towards FDP and VGs. Third, the interactions between the previous two elements.

🌍 TAIS Tailored Attention and Inclusion Practices.

Practices are innovative as they define effective practices (i.e. highly scored by criteria) for a given context describing the correspondence between Vulnerability Contexts, implemented practices and criteria for their evaluation. Such correspondence (or mapping) is the basis to define and characterise the TAISs in terms of: target group, objectives, requirements, type of host community, actual results, related artefacts and evaluation by actors.

🌍 CRIOS collaborative research and innovation online software tool.

The state-of-the-art platform integrates functionality for information and knowledge sharing by different actors involved in the research project, and the related analysis tools that will be fully free/open source software and use open standards and protocols to facilitate interoperability.

- 🌍 Ensure the adoption of innovative policy and practices to address new challenges in the field of migration.
